Note Title 2/7/2010

Schwarz inequality; 1241471 = 11411 11611

Proof: use completeness

$$\hat{I} = \{ |e_i \rangle \langle e_i | \Rightarrow |14 \rangle = \{ |e_i \rangle \langle e_i | 4 \rangle \}$$

$$\Rightarrow |14||^2 = \langle 4|4 \rangle = \{ |e_i \rangle \langle e_i | 4 \rangle |^2 \}$$

$$i = \{ |e_i \rangle \langle e_i | \Rightarrow |14 \rangle |^2 \}$$

If 18>=0 Then Schwart inequality is Kivid.

If
$$147 \neq 0$$
, chose $1e_{1} > 147$

$$= 11411^{2} > 14411 | 1411 > 14414 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441 | 1441$$

Variance of observable A in state 14) is $(\Delta A)^{2} = \langle (\hat{A} - \langle \hat{A} \rangle)^{2} \rangle = \langle (\hat{A} - \langle \hat{A} \rangle)^{2} | \psi \rangle = ||(\hat{A} - \langle \hat{A} \rangle) | \psi \rangle ||^{2}$ (Â is Hermitian).

Schwarz inequality \Longrightarrow $(\Delta A)^{2}(\Delta B)^{2} = 11(\hat{A} - \langle \hat{A} \rangle)|Y\rangle||^{2} 11(\hat{B} - \langle \hat{B} \rangle)|Y\rangle||$ > (<4/(Â-<Â>)(B-(B))14>/2 Let $\hat{C} = \hat{A} - \langle \hat{A} \rangle$, $\hat{D} = \hat{B} - \langle \hat{B} \rangle \Longrightarrow$ CD = EtiF, where

$$\hat{\mathcal{E}} = \frac{1}{2} \left(\hat{\mathcal{C}} \hat{\mathcal{O}} + \hat{\mathcal{O}} \hat{\mathcal{C}} \right) \qquad \hat{\mathcal{F}} = \frac{1}{2} \left(\hat{\mathcal{C}} \hat{\mathcal{O}} - \hat{\mathcal{O}} \hat{\mathcal{C}} \right)$$

Cand Dare Hermitian = Eand Fare Nermitian, because $(\hat{C}\hat{D})^{\dagger} = \hat{D}^{\dagger}\hat{C}^{\dagger} = \hat{D}\hat{C}$

Therefore <41 = 14) and <41 = 14) are 60 th real numbers

=> |<41ê D14>1= <41ê14>2+ <41ê14>2 7 (41Ê14) = 4/(41[ê, ô]14)12 $\hat{c} = \hat{A} - \langle \hat{A} \rangle, \quad \hat{D} = \hat{g} - \langle \hat{g} \rangle \implies [\hat{c}, \hat{D}] = [\hat{A}, \hat{g}]$

· Finally, we have derived (taking positive square routs):

Uncertainty
Principle:

DAAB > 2 K41[Â, B] 14>1

For position and momentum:

$$[\hat{x}, \hat{p}] = i \hat{x} \hat{I} \Rightarrow [\Delta x \Delta p = \frac{1}{2} \hat{x}]$$

or in terms of wave number \hat{k} , where $\hat{p} = t\hat{k}$: $4xAK = \frac{1}{2}$.

under what conditions does this uncertainty inequality become an inequality?

schwarz inequality becomes an equality for 1441/= 1141/11411 or 14) = 14) (14) and 14) are parallel vectors).

This condition becomes $\hat{C}14$ = $\lambda \hat{D}14$ ($\lambda \in C$) in the derivation above.

Also (41Ê14) + (41Ê14) > (41Ê14) becomes an equality if 0 = <41 = 14) = = <41 c D+ D c 14) Substituting CI4> = XDI47 into Kis equation yields 0 = £(\(\lambda + \lambda^*\) < 4 1 \(\hat{D}^2 \rangle V \rangle = \text{Re(\(\lambda\)) | 1 \(\hat{D} \rangle V \rangle \rangle \)

Therefore, either Rell)=0 or DIX)=0

But -- $\hat{D}(Y) = 0$ and $\hat{C}(Y) = \lambda \hat{D}(Y) \Rightarrow \hat{C}(Y) = 0$ In that case $\hat{A}(Y) = \langle \hat{A} \rangle \langle Y \rangle$, $\hat{B}(Y) = \langle \hat{B} \rangle \langle Y \rangle$, thus $\langle Y \rangle$ is a simultaneous eigenstate of \hat{A} and \hat{B} . otherwise λ is imaginary \Rightarrow we write $\lambda = -iY$ where $\langle Y \rangle = -iY \hat{D}(Y) \Rightarrow (\hat{C} + iY \hat{D})(Y) = 0$ $\Rightarrow (\hat{A} + iY \hat{B})(Y) = \langle \hat{A} + iY \hat{B} \rangle \langle Y \rangle$.

Thus 14) is an eigenvector of the (non-Hermitian) operator \hat{A} + i8 \hat{B} .

of course, his statement is also time if 14) is a simultaneous eigenstate of A and B. We conclude that:

Condition for equality in uncertainty relation:

AAAB = \frac{1}{2} < 41 E\hat{A}, \hat{B}]/4> if and only if

14) is an eigenstate of \hat{A} + i \hat{B} for some real number \hat{S}.
